Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35.U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 19-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Malladi (US 5,598,541).

As to claim 19, Malladi, in the same field of endeavor, discloses a receive sequence state machine (RSSM) and transmit sequence state machine (TSSM) (figs. 8 and 9) as **micro-engines** showing circuitry to receive a packet and process the packet (claim 20) accordingly, and exchange and sequence management buffer logic (ESMBL), connected to the micro-engines, provides read and write control and

sequence status and a direct memory access controller for buffering and sequencing and exchange of data frames from memory (see col. 4, lines 30-44, also fig. 3). The sequencer (RSSM, fig. 8) has the capability of receiving the request, processes the packet and assigns the task and a buffer, as discussed above (see col. 9, lines 23-through col. 10, line 31) (claim 21). Malladi discloses a FIFO (payload buffer 56) to receive the queue and to transmit it for sequencing (see col. 8, lines 1-11) (claim 22) Malladi discloses a credit count scheme (counter) processed by RSSM (see col. 16, lines 62 through col. 17, lines 7). Malladi further discloses that RSSM and TSSM also function to read the FIF formatted header for data frame (see col. 10, lines 11-23) (claim 23).
